

1K-style Urethane Surfacer for hobby paint Instruction

Thank you for purchasing 1K-style Urethane Surfacer. Please read the instruction before use.

This 1K-style urethane surfacer fills scratches and scars in the material to be painted, suppresses solvents from the topcoat paint, and improves adhesion. Moreover, it dries quickly and is a paint with excellent workability.

- Agitate well to make the whole liquid evenly mixed.
- Use Thinner for Micro bottle and mix at 20~50% ratio and agitate again.
- Sand prior to paint:
Use 400 ~800 grid for wet sanding.
Use 320~ 600 grid for regular sanding.
- Make sure to dry completely after painted.
Dry-to-touch: 20°C for 10 min.
Paper abrasing dry: 20°C for 30 min.
Forcible dry: 60°C for 10 min.

【Precaution】

- After diluted and kept for a long time, precipitation may occur or the liquid may separate, so be sure to mix well or distill before use.
- If you apply thick at once, it may cause poor drying that result to less glossy and lean. Ensure to take sufficient intervals at each coat.
